Impact of Food and Bioactive Compounds on Metabolic Diseases

Message from the Guest Editors

Metabolic diseases are a significant public health problem worldwide. Metabolic diseases include metabolic syndrome, type 2 diabetes, and non-alcoholic fatty liver disease (NAFLD), leading to the development of cardiovascular disease. In recent years, technology for separating and purifying food components and analyzing biological various samples has improved dramatically, and numerous studies have discovered food factors and bioactive compounds that contribute to preventing and alleviating metabolic diseases. The accumulation of the above basic research knowledge is essential, and we believe that it will lead to the maintenance and promotion of human health. Therefore, in this Special Issue of *Metabolites*, we invite research articles on the “Impact of Food and Bioactive Compounds on Metabolic Diseases” including in vitro studies using cultured cell lines, in vivo studies using animal models, and dietary intervention studies.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Dr. Amedeo Lonardo

1. Formerly Director of the Simple Operating Unit "Metabolic Syndrome", Azienda Ospedaliero-Universitaria, 41126 Modena, Italy
 2. Formerly Professor of Internal Medicine, School of Specialization of Allergology and Clinical Immunology, University of Modena and Reggio Emilia, 41121 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2024).
