

Special Issue

Microstructure–Mechanical Property Relationships in High-Strength Steels (2nd Edition)

Message from the Guest Editors

This Special Issue of *Metals* focuses on microstructure–mechanical-property relationships in (1) advanced high-strength steels, including dual-phase steels, complex-phase steels, low-alloy TRIP-aided steels with a different matrix structure, medium-/high-Mn steels, medium-/high-entropy steels, and low-density steels. Additionally, we intend to highlight (2) traditional high-strength steels such as ferritic/pearlitic steels, precipitation-hardening steels, bainitic/martensitic steels, maraging steels, stainless steels, bearing steels, spring steels, or rail steels. In addition to inviting submissions on these topics, we also welcome research articles on mechanical properties, including tensile properties, formability, toughness, fatigue properties, delayed fracture strength, and wear properties, tested in several conditions, such as elevated and cryogenic temperatures or a corrosive atmosphere.

Guest Editors

Prof. Dr. Koh-ichi Sugimoto

Dr. Tomohiko Hojo

Dr. Junya Kobayashi

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
