

Special Issue

Feature Papers in Crystallography and Applications of Metallic Materials

Message from the Guest Editor

Metallic compounds have multiple applications (automobile, biomedical, structural, magnetic). One of the aspects that most influences its functional response is its microstructure. Therefore, the crystallographic characterization of metal alloys is of scientific and technological interest. One of the goals is to design advanced materials. This Special Issue will be devoted to research work on metallic materials, and on the study of their microstructure and properties (mechanical, electrical, magnetic, optical, etc.). Manuscripts that take into account the influence of the composition or processing, including thermal annealing or pressure application, are also expected. Likewise, in addition to the fundamental works, more complex experimental studies that take into account crystallization, anisotropy, texture and/or crystallographic defects and theoretical studies (ab initio, modelling, simulation) will be analysed. Review papers are also welcomed.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
