

Special Issue

Metallic Functional Materials: Development and Applications

Message from the Guest Editors

Metallic functional materials refer to metallic materials with special physical, chemical, or biological properties that are used for non-structural purposes. They include shape memory alloys, metallic magnetic materials, amorphous alloys, energy materials, biological materials, THz metamaterials, and nanometal materials. In recent decades, more and more metallic functional materials and their functional properties have been explored. Meanwhile, to satisfy the progressive requirements in the field of aerospace, aeronautical, automotive, electronic, and bio-medical applications, more efficient material designs and developments are necessary. The current Special Issue of Metals focuses on the latest developments of metallic functional materials, including new functional properties and applications, efficient design methods (high-throughput multiscale materials computing and machine learning), novel synthesis and processing methods (additive manufacturing), and advanced technologies in material characterizations (interactions with radiation, and diffraction and scattering techniques). We invite submissions of manuscripts to this Special Issue that address the listed topics.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
