

Special Issue

Casting and Manufacturing Processes of Aluminium

Message from the Guest Editors

Cast materials are used in most of our products, ranging from simple household appliances to advanced products, such as cars, lorries, and aircraft. Increasing requirements for lighter, stiffer, and stronger materials are moving the boundaries for material performance further. Aspects critical to delivering an improved performance are the alloy content and the microstructure, especially in light weight alloys, including aluminium alloys. Accordingly, this Special Issue, titled “Casting and Manufacturing Processes of Aluminum”, is intended to review and present the cutting-edge state-of-the-art developments in the production of high quality aluminium alloy castings, including other manufacturing processes involved in the production of castings, such as machining, heat treatment, and hot isostatic pressing. The latest developments in the various aspects of the creation of high-performance microstructures in aluminum are included. Finally, the effect of the processing and structure on the performance of aluminium castings, as well as the applicability of traditional and modern approaches for fatigue design, will be addressed.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
