

## Special Issue

# Computational Mechanics of Fatigue and Fracture in Metallic Materials

### Message from the Guest Editors

Conventional damage and fatigue models and fracture criteria in many situations fail to accurately predict ductile and fatigue failure, especially for complex loading paths and for new advanced materials. There is the space and need, for new ideas and proposals to tackle those limitations. A diverse variety of topics may be addressed for fatigue crack initiation and propagation and fracture modeling, comprising:

- Theoretical and numerical aspects related to advanced fully coupled constitutive equations;
- New mathematical formulations and numerical solution strategies for continuous/discontinuous transition, size effects, mesh dependence, solution schemes involving nonlocal methods, phase-field models, cohesive zone models, XFEM and GFEM approaches;
- Multiscale strategies for modeling fatigue crack initiation and growth and fracture, scale-bridging, and model order reduction techniques;

and various related topics. This Special Issue aims to address multiple associated aspects, ranging from constitutive model proposals to numerical solution strategies for fatigue crack initiation, propagation, and fracture. We look forward to your contribution.

## About the Journal

### Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
