

Special Issue

Experimental and Numerical Analysis of Composite Contribution Structures

Message from the Guest Editor

The main aim of the Special Issue is to promote experimental and numerical research on steel structures reinforced with composite materials. Steel structures made of standard structural members (bars, beams, columns, plates) may be reinforced with materials that have higher strength properties. In this Special Issue, the application of fiber-reinforced polymers (FRP) to strengthening of steel profiles is discussed. The development of FRP and their application in the aviation industry have shown that these materials can withstand severe weather conditions and can carry high loads. Carbon fiber-reinforced polymers (CFRP) are a promising alternative to standard methods of reinforcing steel structures. They are corrosion resistant, have low density and high tensile strength. The gluing of composite elements is simple and easy to implement. The big advantage of steel profiles reinforced with FRP is their increased resistance to static, dynamic and fatigue loads. The most interesting articles present experimental investigations and numerical simulations that can be used to prepare and validate computational methods of analyzing of such structures.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
