

Special Issue

Precipitation and Characterization of Light Alloys

Message from the Guest Editor

Light alloys such as aluminum and magnesium are important materials for the automobile, aircraft, and electronic industries. In recent decades, fruitful studies have reported the microstructure characteristics, mechanical properties, and advantages of light alloys. However, there are still many unproven theories and unsolved problems in light alloys. Thus, to further trigger the development of light alloys, it is imperative to research the relationship between microstructure characteristics and mechanical properties more in depth. It is for this reason that we are launching the present Special Issue on “Precipitation and Characterization of Light Alloys”. This Special Issue shall collect outstanding research on light alloys around the world, including but not limited to heat treatment, plastic processing, microstructure characterization, mechanical properties, precipitation, phase transformation, magnesium, aluminum, titanium, shape memory alloy, SEM, EBSD, FIB, TEM, and in situ X-ray. It is our pleasure to welcome you to submit your work to this Special Issue on “Precipitation and Characterization of Light Alloys” in *Metals*.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
