

Special Issue

Manufacturing and Characterization of Metallic Electrode Materials

Message from the Guest Editor

Global energy shortage issues are becoming more and more prominent, with stronger requirements for the development of new energy storage devices and technologies. Such devices and technologies have seen vigorous development in recent years, particularly those based on metallic electrode materials, including Li/Na/K/Mg/Ca/Zn/Al metal batteries, metal-air batteries, solar energy storage, catalytic hydrogen production, and so on. Some advanced materials exhibit excellent electrochemical properties, such as high energy density, large capacity, long life cycle, and even good safety. From an industrial perspective, the position of lithium-ion batteries in the field of chemical energy storage cannot be replaced in the short term. Currently, metallic electrode materials still have certain defects. In order to meet the energy storage demand, novel high-performance metallic electrode material systems should be explored, while large-scale production processing of next-generation chemical energy storage devices should be developed. In addition, advanced characterization methods are continuing to emerge, providing basic data support for the regulation of their structure and properties.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
