Rapid Solidification Processing

Message from the Guest Editor

Rapid solidification processing (RSP), whether by rapid quenching, deep undercooling or a combination of the two, has been at the forefront of solidification science for the last 50 years or more. From an applications standpoint, RSP permits access to a range of compositional and morphological states, including metastable phases, highly grain refined structures and non-crystalline materials, not otherwise available to the materials engineer. This in turn leads to improved mechanical, thermal and corrosion resistance properties, which have found utilization in a range of high-value added sectors. With the rise of Additive Layer Manufacturing driving a near exponential growth in demand for melt atomized metal powders, an inherently RSP material, interest in the field looks set for continued growth. For this Special Issue in *Metals*, we welcome reviews and articles in all areas of experimental and theoretical rapid solidification, including the simulation of rapid solidification structures and processes.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
