Microfluidics and 3D Printing for Biomedical Applications

Message from the Guest Editors

Microfluidics and 3D printing are two promising microfabrication techniques that have recently gained attention in the biomedical field because of their reliability, precision, and wide range of applications. Microfluidics allows for the fabrication of microscale tissue and disease models that can be used to test drug responses recapitulating human clinical conditions. Three-dimensional printing provides spatial and temporal control on the type, concentration, and distribution of cells, signaling molecules, and materials, enabling the construction of functional tissues and disease models with high precision and complexity. These two techniques make it possible to create a 3D microenvironment for the cells to mimic cell–cell and cell–material interactions in the body, which are essential for tissue-level maturity and functionality. This Special Issue seeks to showcase research papers and review articles that focus on the tissue engineering applications of microfluidics and 3D printing, including organs-on-chips, tissue engineering scaffolds, disease models, and drug testing platforms.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q2 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.8 days (median values for papers published in this journal in the second half of 2024).
