FET and Field Effect-Based Sensors

Message from the Guest Editor

In 2022, our society will enter the Trillion Sensors Universe where things are connected on the internet with digital information through many tiny sensors in the field of medicine, agriculture, environment protection, homeland security, and so on to realize the Smart Society. Field-effect transistors (FETs) have a long history and good results in sensing and imaging applications due to their CMOS processing and wide applicability as an interface and are still good candidates for physical, chemical, ionic, and biological sensing in the next generation. One example is the use of FETs for label-free biosensing via electrostatic interactions between carriers in semiconductor materials and target analyte, which is specifically recognized on a gate dielectric. Nowadays, field-effect devices based on organic materials (e.g., conducting polymers) are developed with features on flexibility, lightness, biocompatibility, low cost, and mass productivity. An understanding of both the basics and applications is essential for further development.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q2 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
