

Special Issue

Nanomaterials and Microstructures in Bone Regeneration

Message from the Guest Editor

Rejection and contamination problems related to scaffolds and implants are the challenges in bone regeneration. Bone tissue engineering has evolved as an interdisciplinary method to design materials and engineer functions based on developing platforms for cell adhesion, migration, and proliferation. Designing facile techniques to achieve advanced architecture for this purpose is highly sought after in nano- and micro-structures as an effective and innovative structure to mimic the extracellular matrix (ECM). These nano- and micro-structures provide attractive constructions for critical skeletal defects. This Special Issue aims to gather high-quality original research work and specialized review articles on a wide range of topics, including biomimetic materials, self-healing materials, nanocomposite materials, and microstructures for bone regeneration and bone-related implants.

- bone implants
- bone regeneration
- bone scaffold
- guided bone regeneration
- nanostructure
- microstructure
- bone tissue engineering
- 3D scaffold
- nanocomposites
- biocompatible nano and micro for bone

About the Journal

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q2 (Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
