

# Special Issue

## Novel Antimicrobial Strategies

### Message from the Guest Editors

Science and technology based on novel antimicrobial strategies with the use of protocols and/or products for the control of microorganisms resistant and/or tolerant to physical and/or chemical agents are fundamental in the advancement of scientific knowledge, using integrated and unified approaches, aiming at the balance and optimization of the health of people, animals, plants, and the environment. Thus, this Special Issue aims to showcase studies that propose novel antimicrobial strategies to control the challenges related to multidrug-resistant microorganisms and the problem of biofilm tolerance to physical and chemical agents in different areas of knowledge.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 11.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
