Special Issue

Ecological Distribution, Biogeochemical Function, and Pathogenicity to Marine Organisms of *Vibrio* spp.

Message from the Guest Editor

The genus Vibrio is one of the best model marine heterotrophic bacterial groups. The ecological distribution of Vibrio spp. Is complex and can be affected by various factors. They can inhabit different habitats within the marine environments, including coastal waters, sediment, and the gastrointestinal tracts or tissues of marine organisms. Vibrio spp. play important roles in the biogeochemical cycles, especially in terms of the marine carbon cycles. They can consume a wide array of organic carbon compounds as carbon and energy sources, including chitin, alginate, and agar. Further, several species within the genus Vibrio are well known to cause diseases in marine animals, such as shellfish poisoning, septicemia in fish, and bacterial bleaching of corals. Understanding the pathogenicity of vibrios is crucial for developing effective prevention and control measures to protect marine ecosystems and human health. In summary, this Special Issue will focus on the biogeochemical function and potential harm of Vibrio spp. in marine environments, as understanding these aspects is crucial for protecting marine ecosystems and human health.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich
Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:
JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 11.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
