

Special Issue

Research on Relevant Clinical Infections

Message from the Guest Editors

Microbial infections have emerged to cause diseases that can be devastating and sometimes fatal to the host. The four main groups of causative pathogens are viruses, bacteria, fungi, and parasites. Polymicrobial infections caused by combinations of pathogens are a special case. However, many infectious diseases are caused by bacterial infections which caused very high mortality rates before antibiotics were discovered. Nowadays, the rapid global spread of pathogens that have acquired new antimicrobial resistance mechanisms is a major global health threat, causing difficult-to-treat infections and are therefore of particular interest to researchers in the clinical setting. This Special Issue aims to present recent findings on various aspects of relevant clinical microbial infections. The main focus points include: Epidemiology and clinical features of microbial infections; Infections in special populations / nosocomial infections; Molecular insights into the pathomechanisms of specific infections; Challenges and advances in the treatment of microbial infections; Antimicrobial resistance mechanisms in microbial infections.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 11.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
