

Special Issue

Characterization, Processing and Utilization of Coal, 2nd Edition

Message from the Guest Editors

This Special Issue is organized into three sections: Section 1—Production: research and case studies in specific coal exploration and processing systems. Section 2—Utilization and conversion: research and case studies for the use and/or conversion of coal in metallurgical and carbochemical industries. Section 3—Environmental control: research and case studies for environmental control systems, the recovery of degraded areas, and the development of cleaner technologies for the coal industry.

About the Journal

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Mineralogy) / CiteScore - Q2 (Geology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
