

## Special Issue

# Potentially Toxic Elements in Soils Affected by Metal Mining and Processing

### Message from the Guest Editors

Production of metals has always been and remains an important constituent in the development of civilization. Mining of metal ores, as well as their processing that involves various methods of concentration and smelting, belong to those human activities that strongly affect the environment. They usually lead to its considerable enrichment in potentially toxic elements, such as heavy metals and metalloids. The problem of soil pollution in such sites relates both to abandoned historical mines and smelters and to currently operating plants...This Special Issue of *Minerals* welcomes works dealing with various problems related to soil contamination in the sites affected by metal ore mining and processing, including weathering of metal(loid)-hosting minerals, biogeochemistry of potentially toxic elements in soils, their release into water and uptake by plants, assessment of associated environmental risk, as well as the methods of soil remediation.

## About the Journal

### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Mineralogy) / CiteScore - Q2 (Geology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
