

## Special Issue

# Spinel Group Minerals, Volume II

### Message from the Guest Editor

The members of the spinel group are frequent accessory minerals of both igneous and metamorphic rocks and occur also as detrital grains in many sediments. Many spinels can be important for their industrial application, and some of them constitute important ore deposits. The idea coming from this second issue dedicated to spinel group minerals is to bring together, once again, specialists from different fields in order to acquire new knowledge on the geological history and industrial applications of these important minerals that can tell us so much about the interior of the Earth as well as the story of meteorites. Spectroscopic, as well as provenance or archeometric studies are welcome for submission.

## About the Journal

### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Mineralogy) / CiteScore - Q2 (Geology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
