

Special Issue

Zr-minerals

Message from the Guest Editors

We have the pleasure of inviting you to participate in a Special Issue of *Minerals* devoted to zirconium minerals. Zirconium is a very interesting and truly paradoxical chemical element from the mineralogical and geochemical viewpoints: being a rare element (its content in the Earth's crust is *ca.* 0.02 wt.%), Zr is known as a species-defining constituent of more than a hundred minerals, and some of them form huge and rich deposits, with resources of many millions of tons. Most zirconium minerals are silicates and oxides, which demonstrates the great diversity of crystal structures and physical properties. Zirconosilicates of the eudialyte group have the most complicated structures among all known natural inorganic compounds. Zirconium minerals possess many technologically important properties and are in wide use in different branches of modern industry. The increase of knowledge in the fields of crystal chemistry, properties, and the genesis of zirconium minerals is undoubtedly important for the development of both Earth and materials science.

Guest Editors

Dr. Natalia V. Zubkova

Department of Crystallography and Crystal Chemistry, Lomonosov Moscow State University, 119991 Moscow, Russia

Prof. Dr. Gerald Giester

Department of Mineralogy and Crystallography, University of Vienna, Althanstr. 14, A-1090 Vienna, Austria

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Editor-in-Chief

Prof. Dr. Leonid Dubrovinsky

Bayerisches Geoinstitut, University Bayreuth, D-95440 Bayreuth,
Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Mineralogy) / CiteScore - Q2 (Geology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
