

Special Issue

Synthesis of Flavonoids or Other Nature-Inspired Small Molecules

Message from the Guest Editor

Natural compounds are characterized by a unique variety of chemical structures, functional groups, and stereochemical properties. Moreover, from the medicinal chemistry point of view, several naturally occurring small molecules are endowed with valuable biological activities and have inspired the design and development of drugs. Flavonoids represent an outstanding example among natural compounds. This Special Issue aims at collating original contributions describing the synthesis of natural compounds and semi-synthetic derivatives of natural molecules. Articles should contain original and efficient synthetic approaches or significant process innovations in the preparation of natural and semi-synthetic compounds, with a particular focus on biologically relevant molecules. Moreover, research articles reporting significant results concerning extraction procedures, structural elucidation and structural characterization of natural compounds and derivatives involving the use of advanced analytical techniques (chromatography, 1D and 2D NMR, mass spectrometry, IR and UV spectroscopy) are particularly welcome.

About the Journal

Message from the Editor-in-Chief

Molbank is a unique electronic journal that rapidly publishes very short articles, which typically encompass one compound per paper (“short notes”) as well as “communications”. The aim of this format is to prevent potentially useful scientific information from being lost. In many research groups, there are unpublished compounds that are available, which do not truly fit into a full paper or even a conventional short paper, e.g. because the main work in a series of compounds has already been published. Nevertheless, somebody else might be interested in just this particular compound. *Molbank* offers an excellent platform for preserving the aforesaid kind of information.

Editor-in-Chief

Prof. Dr. Nicholas Leadbeater

Department of Chemistry, University of Connecticut, 55 North Eagleville Road, Storrs, CT 06269-3060, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Reaxys, CAPIus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.9 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
