

## Special Issue

# Novel Natural Compounds as Wound Healing Agents

### Message from the Guest Editors

The skin is one of the most important organs in the body because it protects it from environmental hazards. A complicated dynamic wound-healing mechanism is launched immediately after a skin injury by a complex sequence of cellular, molecular, and biochemical processes with a signaling cascade. Chronic wounds are wounds that have progressed into a condition of pathological inflammation rather than healing normally. In type 2 diabetic mellitus (DM) patients, delayed foot wound healing is a prominent consequence linked to hyperglycemia, and these wounds can lead to foot ulcers. Debridement of necrotic tissue, use of topical antibiotics to limit infection, and application of a wound dressing (e.g., films, fibers, hydrogels) are all common treatments for chronic wounds. However, finding out a drug with potent wound-healing properties and fewer side effects still needed. Thus, studies investigating the beneficial effects of herbal extract as well as individual secondary metabolites on wound healing in silico, in vitro, and in vivo, along with the involved molecular mechanisms, will be a subject of interest for this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
