

## Special Issue

# Chromatographic and Electrophoretic Separation Methods in Pharmaceutical Analysis

### Message from the Guest Editors

Modern pharmaceutical research is strongly linked to pharmaceutical analysis, as the development of new innovative methods of analysis is becoming both a necessity and a challenge for analysts. The current Special Issue highlights the role of various analytical techniques in the analysis of pharmaceuticals, focusing on the applications of high-performance liquid chromatography (HPLC) and capillary electrophoresis (CE). Although HPLC is the most common technique for separating complicated mixtures of chemicals, CE today can be considered an interesting alternative and, sometimes, a complementary method in the drug analysis. This Special Issue focuses on original research papers covering the development and application of chromatographic and electrophoretic methods in modern pharmaceutical analysis. Review papers presenting an in-depth analysis of the state-of-the-art of the topic are also eligible. Scientists focusing on this domain are encouraged to submit their research results for publication in this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
