# Drug Analysis in Pharmaceutical Development and Drug Manufacturing

### Message from the Guest Editor

Drug analysis includes aspects of drugs identification and quantitative analysis, characterizing their molecular structures, crystalline/amorphous phases, size, shape, and orientation of the particles, assessing their affinity, specificity, solubility and stability, testing their efficiency in vitro and in vivo and also current control during drug manufacturing. ## About the Journal

### Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
