

## Special Issue

# Gas–Liquid–Solid Interface Characterization and Targeted Regulation

### Message from the Guest Editor

This Special Issue will report research or advances in the characterization and targeted regulation of gas–liquid–solid interfaces, including the regulation of the structure, composition, or environmental conditions of these interfaces, as well as the interface wettability, adhesion, reactivity, and so on. Potential topics include, but are not limited to, the following:

- Directional regulation of gas–liquid–solid interfaces in fine mineral flotation separation;
- Interfacial regulation in the preparation of nanomaterials and functional materials;
- Interfacial regulation to improve reaction efficiency and product purity;
- Interface regulation to improve the energy conversion efficiency and stability;
- Interfacial regulation in wastewater treatment, oil–water separation, and air purification.

## About the Journal

### Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

---

### Editor-in-Chief

Prof. Dr. Shirley Chiang  
Department of Physics, University of California Davis, One Shields  
Avenue, Davis, CA 95616-5270, USA

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1  
(General Chemical Engineering )
