Special Issue

Nanomaterials for Sensors, Actuators and Environmental Applications

Message from the Guest Editor

The ability to finely manipulate matter at the nanometer level has opened up a new field of knowledge called "nanoscience and nanotechnology". The control of the size, structure, composition and morphology of inorganic, organic and hybrid nanostructures and nanocomposites allows us to compile, so to speak, a new periodic table of elements, still largely unexplored. The purpose of this Special Issue is to gather the latest results in modeling, simulation, synthesis, advanced characterization and potential applications of nanostructured materials, leading to a more eco-sustainable world. Topics will include, but are not limited to:

- The modeling, simulation and characterization of nanomaterials;
- Innovative preparation routes for nanomaterials with tailored spatial organization;
- Environmental monitoring;
- Healthcare;
- Food quality assessment;
- Sensing and biosensing devices;
- Energy harvesting, storage and conversion;
- Functional and smart materials;
- Recycling and renewable resources.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Shirley Chiang
Department of Physics, University of California Davis, One Shields Avenue, Davis, CA 95616-5270, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (General Chemical Engineering)
