

## Special Issue

# Nanomaterials and Nanotechnology for Electrode Processing and Manufacturing

### Message from the Guest Editors

Conventional fossil-fuel-based vehicles inevitably lead to huge carbon dioxide emission and cause a series of global warming effects. To alleviate the aforementioned issues, research and development of new nanomaterials and manufacturing strategies for energy conversion and/or energy storage are truly essential. Fortunately, the material science and manufacturing science of energy conversion and energy storage have been developing in a fast manner, which is promising for eco-friendly purposes. This Special Issue, entitled “Processing and Manufacturing of Nanomaterials for Energy Conversion and/or Energy Storage”, will collect studies focused on the recent progress in energy conversion and energy storage, including nanomaterial aspects and manufacturing aspects. The relevant manuscripts concerning the processing of novel nanomaterials for the applications in different fields, such as electrocatalysis, lithium batteries, supercapacitors, fuel cells, etc., can be submitted for this Special Issue. To facilitate the readership, broad article types are available and welcome, namely research articles, communications, letters, and review articles.

## About the Journal

### Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1  
(General Chemical Engineering)
