Synthesis and Application of Nanoscale Heterogeneous Catalysis

Message from the Guest Editors

Nanocatalysts are widely used in a range of important heterogeneous catalytic reactions, such as electrocatalysis, photocatalysis, and thermal catalysis. The controllable synthesis of these nanocatalysts is the key to the optimization of catalytic activity. It is still difficult to control the synthesis process used to prepare the catalysts we want. Furthermore, explaining the relationship between the structure/morphology and catalytic activity of the synthesized catalyst is also a key factor in developing high-activity catalyst, but more research is still needed. Therefore, the present Special Issue of *Nanomaterials* aims to present the current state of the art in the synthesis and application of nanoscale heterogeneous catalysts. The synthesized nanocatalysts include (but are not limited to) noble metal nanocatalysts, non-noble metal nanocatalysts, single-atom catalysts, carbon-based catalysts, etc. In the present Special Issue, we invite contributions (reviews or research papers) with the aim of providing a balanced overview of the current state-of-the-art advances in this discipline.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Shirley Chiang
Department of Physics, University of California Davis, One Shields
Avenue, Davis, CA 95616-5270, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1
(General Chemical Engineering)
