

Special Issue

Green Synthesis of Nanomaterials and Its Applications

Message from the Guest Editor

Nanotechnology is a research field that has experienced enormous expansion and a rise in scientific interest in recent years. However, interest is also rising in the anthropogenic effect into the environment.

Consequently, alternative efficient procedures for the synthesis of nanoparticles are also on the focus of research. Cost-effective nanoparticle synthesis pathways, using renewable resources or employing byproducts of other activities are attracting scientists' interest, in line with a world immersed in the circular economy concept. The use of complex matrixes, sometimes not well defined, is not free of new scientific challenges and limitations. This Special Issue will describe green synthesis approaches for the preparation of metallic nanoparticles and their applications. Pereira

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Shirley Chiang
Department of Physics, University of California Davis, One Shields
Avenue, Davis, CA 95616-5270, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1
(General Chemical Engineering)
