Nutrition in the Digital Age— Innovation and Trends in Dietary Patterns and Healthy Lifestyle

Message from the Guest Editors

We are excited to invite you to submit research manuscripts utilising the new digital dietary assessment technologies to collect food and beverage data from populations. The types of tools might be automated recalls, image capture for assessing food intake, apps for prospective recording of food intake or digital food frequency instruments. We are interested to see how they have been used to further the study of dietary intake patterns across time, throughout the lifecycle and in different countries. The use of tools in low- and middle-income countries is of special interest in addition to their use in higher-income countries. With this Special Issue, we hope to assemble data from across the world to understand dietary patterns and how they are influencing global health outcomes. We welcome original research articles, systematic and scoping reviews and meta-analyses. Research in both healthy populations and various subgroups with disease states is of interest.
