Nutritional Supplements to Optimize Exercise Performance

Message from the Guest Editors

The ability of nutritional supplements to optimize performance has long been an area of focus within the field of sports nutrition and human performance. There are hundreds of nutrients, such as creatine, beta-alanine, vitamin D, nitrates, and caffeine, that have been well-studied, with consistent evidence supporting their ability to improve athletic performance and health. However, there continues to be a need to explore additional nutrients of interest, as well as alternative applications or potential benefits in unexplored populations. Nutritional supplementation studies including younger athletes and female athletes are understudied and therefore will be an area of interest for this Special Issue. Similarly, long-term supplementation studies are also needed to better understand the implications of continued supplementation on training adaptations and overall health in athletic populations.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluís Serra-Majem

1. Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
2. Research Institute of Biomedical and Health Sciences (IUIBS), University of Las Palmas de Gran Canaria, 35001 Las Palmas, Spain
3. Preventive Medicine Service, Centro Hospitalario Universitario Insular Materno Infantil (CHUIMI), Canarian Health Service, 35016 Las Palmas, Spain

Prof. Dr. Maria Luz Fernandez
