

Special Issue

Reactive Oxygen Species as Modulators of Redox-Dependent Signal Transduction Pathways

Message from the Guest Editor

Understanding the mechanisms underlying cellular redox homeostasis may help us to develop new therapeutical strategies to counteract the development of a wide range of redox-dependent pathologies, including cardiovascular, neurodegenerative, and inflammatory-based diseases and cancer. The aim of this Special Issue is to bring together recent research, in the form of either original research papers or reviews, on the activity and control of redox-regulated cell systems in physiological processes and pathological conditions. These can include both in vitro and in vivo studies aiming to explore molecular mechanisms as well as cell and body responses. In addition, the role of phytochemicals and xenobiotics in the control of redox-dependent pathophysiological conditions will be considered.

Guest Editor

Dr. Mario Allegra

Dipartimento di Scienze e Tecnologie Biologiche Chimiche e Farmaceutiche, Università degli Studi di Palermo, 90123 Palermo, Italy

Deadline for manuscript submissions

closed (31 October 2022)

School of Applied Sciences, University of the West of England, Bristol,
UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
