

## Special Issue

# State-of-Art and Perspectives of Parasites in China

### Message from the Guest Editors

In this Special Issue, we call for papers pertaining to the latest knowledge on the biology, epidemiology, diagnosis and treatment of emerging and re-emerging zoonotic and foodborne parasitic diseases, as well as the immune regulation and pathogenesis of these diseases and host–pathogen–vector interactions. This Special Issue is dedicated to the rapid publication and global dissemination of the latest findings regarding national parasitic disease control programs in China. In addition, the lessons and experiences from these control programs may contribute to the disease elimination program in disease-endemic countries worldwide. Original and review articles pertaining to parasites and parasitic diseases are welcome, and interdisciplinary studies aiming to provide novel tools for parasitic disease elimination are preferred. This topic aims to bridge together policy makers, research scientists, clinical physicians, public health professionals and veterinarians that are working in the diverse discipline of parasitic diseases, thereby facilitating progress towards the elimination of parasitic diseases in China.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.
