

Special Issue

Emerging Zoonoses and Global Health

Message from the Guest Editor

Nowadays zoonotic diseases can have an unprecedented impact on the global human population. Often, from our anthropocentric perspective, we forget that we are also part of nature. Humans are part of an extremely complex biosphere, with multitude relationships between living organisms and the environment. The modification of these relationships can favour the viruses cross the species barrier and infect the humans. This special issue topic wants to include articles that analyse the factors that can affect the emergence of viral zoonoses either by favouring the species leap or the spread of zoonotic viruses. In this sense, we encourage to send us papers with an epidemiological, virological, or ecological approach.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary & Biomedical Sciences, University of Minnesota, Twin Cities, MN, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q2 (General Immunology and Microbiology)
