New Trends in Metal-Doped Photocatalytic Materials

Message from the Guest Editors

Photocatalysts represent a large class of materials used in a wide range of applications, such as industrial synthesis, drug delivery, energy storage, and wastewater treatment. However, the photocatalytic efficiency of bare photocatalysts is relatively low; metal doping is a fundamental and an effective technique used for band-gap engineering, consequently improving photocatalytic performances. Potential topics of interest for this Special Issue include, but are not limited to, the following aspects:

- Synthesis and characterization of novel metal-doped photocatalysts;
- Processes intensification using metal doping;
- Metal-doped photo-materials in wastewater and air treatment;
- Metal-doped photocatalytic materials for sustainability;
- Reactor and plant design for metal-doped catalysts;
- Reviews on metal-doped photocatalysts.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Dirk M. Guldi
Department of Chemistry and Pharmacy, Interdisciplinary Center for
Molecular Materials, Friedrich-Alexander-Universitaet Erlangen-
Nuernberg, 91052 Erlangen, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), EBSCO,
and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 24.6 days after
submission; acceptance to publication is undertaken in 6.8
days (median values for papers published in this journal in
the first half of 2024).
