## Diffractive Optics and Its Emerging Applications

### Message from the Guest Editors

Diffraction is a type of fundamental interaction between light and matter. Diffractive optical elements are known to bend and shape light waves in most exotic and unconventional ways by imposing spatial modulation of wave fronts. However, only spatial features with wavelength or sub-wavelength sizes can induce observable diffraction effects, posing potential challenges in the simulation and fabrication of diffractive components. This Special Issue aims to cover recent progress in diffractive optics technology. Topics of interest include, but are not limited to the following areas:

- Theory and modeling of diffractive optics;
- Optimization algorithms;
- Diffractive + refractive hybrid systems;
- New capabilities and performance enhancements;
- Metasurfaces and metalenses;
- Diffractive optical elements for imaging, sensing, and spectroscopy;
- Applications in AR/VR, LiDAR, machine vision, intraocular lenses, computational imaging, etc.;
- Diffractive neural networks and free-space optical computing;
- Novel fabrication and replication techniques;
- Reconfigurable and programmable photonic devices.

I look forward to receiving your contributions.

---

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Nelson Tansu  
School of Electrical and Electronic Engineering (EEE), The University of  
Adelaide, Adelaide, SA 5005, Australia

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,  
CAPlus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Optics)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 14.9 days after  
submission; acceptance to publication is undertaken in 1.9  
days (median values for papers published in this journal in  
the second half of 2024).
