# New Perspectives in Free-Space Optical Communications and Networks

## Message from the Guest Editor

Free-space communications at optical frequencies will bring about a paradigm shift in global communications, relieving the bottleneck caused by radio frequency (RF) communications and its limitations. Free-space data capacity will be increased by orders of magnitude, and the high directionality of optical beams affords increased security and negates the need for spectrum regulation. Overcoming the challenges of free-space optical communications has drawn expertise beyond those traditionally found in the telecommunications industry, calling on researchers from fields such as astronomy and adaptive optics, machine learning, and others. This Special Issue aims to showcase these new perspectives in free-space optical communications, and we invite theoretical and experimental papers on topics including, but not limited to, the following:

- adaptive optics and other turbulence mitigation techniques;
- free-space optical communication systems and network architectures;
- novel modulation/multiplexing techniques such as modulating retroreflectors;
- ultra-high data rate demonstrations;
- machine learning/Al-assisted weather forecasting/scheduling for optical ground stations.

## Message from the Editor-in-Chief

#### Editor-in-Chief

Prof. Dr. Nelson Tansu School of Electrical and Electronic Engineering (EEE), The University of Adelaide, Adelaide, SA 5005, Australia

### **Author Benefits**

**High Visibility:** 

indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Optics)

### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
