Design and Applications of Plasmonic Metasurfaces

Message from the Guest Editors

As the two-dimensional analogy of metamaterials, metasurfaces have attracted considerable attentions over the past few decades due to their planar configurations, ease of fabrication, and exceptional capabilities for flexible light wave manipulation (e.g., phase, amplitude, polarization, and orbital angular momentum) at the nanometer scale. The objective of this Special Issue is to bring together recent advancements concerning the design, operation principles, fabrication, and potential applications of plasmonic metasurfaces. Topics of this Special Issue include but are not limited to the following:

- Fundamentals of plasmonic metasurfaces;
- Design and fabrication of plasmonic metasurfaces;
- Wavefront manipulation with plasmonic metasurfaces;
- Active plasmonic metasurfaces;
- Nonlinear plasmonic metasurfaces;
- Quantum plasmonic metasurfaces;
- Bound states in the continuum (BIC) in plasmonic metasurfaces;
- Hybrid plasmonic metasurfaces;
- Plasmonic metasurfaces for sensing applications;
- Two-dimensional materials and plasmonic metasurfaces;
- Electromagnetic surface modes and plasmonic metasurfaces.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Nelson Tansu
School of Electrical and Electronic Engineering (EEE), The University of
Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Optics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 14.9 days after
submission; acceptance to publication is undertaken in 1.9
days (median values for papers published in this journal in
the second half of 2024).
