

Special Issue

Optomechanics: Science and Applications

Message from the Guest Editor

This Special Issue is devoted to publishing recent advancements in optomechanics, which investigates the interaction between photons and mechanical motions. There have been many remarkable developments in optomechanics recently. Quantum behaviors have been observed in different optomechanical systems, including nanofabricated resonators, optically levitated nanoparticles, and LIGO's 40-kilogram mirrors. Optomechanical systems have also found essential applications in acceleration and rotation sensing, precision measurements, quantum state transduction, and beyond. This Special Issue brings worldwide experts together to discuss the latest research in all fields of optomechanics. Topics include but are not limited to the following:

- Cavity optomechanics;
- Levitated optomechanics;
- Superfluid optomechanics;
- Optomechanical crystals;
- Optomechanics with 1D and 2D materials;
- Optomechanical transduction;
- Optomechanical sensing;
- Spin optomechanics;
- Hybrid optomechanical devices.

Guest Editor

Prof. Dr. Tongcang Li

Department of Physics and Astronomy and School of Electrical and Computer Engineering, Purdue University, 525 Northwestern Ave, West Lafayette, IN 47907, USA

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Nelson Tansu
School of Electrical and Electronic Engineering (EEE), The University of
Adelaide, Adelaide, SA 5005, Australia

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Optics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 14.8 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2024).
