

## Special Issue

# Radiation Spectroscopy with Solid Scintillators for Rare Events

### Message from the Guest Editors

Crystal scintillators are one of the most useful and effective tools for the detection and spectroscopy of a wide variety of radiations. The continuous development of their performances allows applications in many challenging research fields. In fact, crystal scintillators are fundamental instruments to study most important problems in particle and nuclear physics, astrophysics and cosmology. Further to this, when the radio-purity of such detectors is an additional requirement, their use in the investigation of rare processes becomes extremely competitive. Moreover, the possibility of significant enrichments in some specific isotopes strongly enlarges the applications for the investigation of several rare processes, such as dark matter candidates of various natures,  $\beta\beta$  decay modes, rare nuclear decay modes, solar axions, electron stability, matter stability, search for exotic particles in cosmic rays, etc. The aim of this Special Issue is to collect contributions for a suitable discussion on the performances and developments of crystal scintillators for rare events.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Edward Sarkisyan–Grinbaum

1. Experimental Physics Department, CERN, 1211 Geneva 23,  
Switzerland

2. Department of Physics, The University of Texas at Arlington,  
Arlington, TX 76019, USA

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid  
by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec,  
INSPIRE, Astrophysics Data System, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 33.6 days after  
submission; acceptance to publication is undertaken in  
42.7 days (median values for papers published in this  
journal in the first half of 2024).
