Advances in Plant-Fungal Pathogen Interaction

Message from the Guest Editors

Fungal pathogens are widely known to be destructive, causing economically important plant diseases, especially in greenhouse crops and ornamentals, during their cultivation, storage, and distribution. In recent years, significant developments have been made in the biology of fungi at the genetic, transcriptomic, proteomic, and metabolomic levels. In this way, it has been possible to identify genes such as pathogenicity and/or virulence factors, proteins secreted and used by the fungi to cause infection, and also toxins and other metabolites synthesized by these pathogens. Although many scientific advances have been made in the development of in vitro experiments, many groups are choosing to carry out in vivo experiments, closer to reality, where the plant can develop their defense mechanisms. In this Special Issue, we want to collect articles from your research groups that study these attack mechanisms of fungal pathogens during plant infection or related with the mechanisms of infection of fungi and mechanisms of defense of host plants, including genomic, transcriptomic, proteomic, and metabolomic approaches.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
