Sustainable Recovery of Bio-Active Compounds from Fruit and Vegetable

Message from the Guest Editor

By following the circular economy principles, valorization of natural bioactive compounds (NBCs) from agro-industrial material (even waste) is a mandatory commitment for a sustainable future, as it meets three fundamental demands for the sustainability of the future human society: more food; less waste; healthy people. In fact, bioactive compounds in fruits and vegetables are receiving increased attention because of their potential health benefits. Moreover, throughout the agro-industrial chain, from farmers to final consumers, a large amount of fruit and vegetable waste product is generated. This material still contains a significant number of micronutrients, vitamins, and the natural bioactive compounds (NBCs) mentioned above, which possess a variety of biological activities. The biggest research challenge is now the identification of the best “extraction” conditions, in order to improve release of NBCs from the vegetable matrix in which they are encased. This Special Issue will highlight the research of new potential NBCs with important biological activities from different fruit and vegetable, extracted in a sustainable way according to circular economy principles.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
