Worldwide Evaluations of Quinoa—Biodiversity and Food Security under Climate Change Pressures

Message from the Guest Editors

Quinoa (*Chenopodium quinoa* Willd.) is a herbaceous plant domesticated more than 5000 years BP in the Andean region. The crop is characterized by very high biodiversity, which allows it to adapt easily considering the very different pedoclimatic conditions it faces, as well as makes it resistant to abiotic stresses and climate change proof. Moreover, quinoa is distinguished by its exceptional nutritional characteristics, such as the content and quality of proteins, minerals, lipids, and tocopherols. These features have determined, since the 1990s, the growing interest for quinoa crop by the scientific community and international organizations. In 2013, the United Nations Organization for Food and Agriculture (FAO) celebrated the “International Year of Quinoa” to valorize its biodiversity for fighting against food insecurity. Several experiments around the world have taken place in order to study the quinoa plant, thus evaluating the adaptability of different genotypes in new environments, and its response to various laboratory stimuli and cultivation best practices.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
