

Special Issue

Degradation and Biological Application of Polymers

Message from the Guest Editors

Polymers represent a significant group of biomaterials that have been exploited for biological and biomedical applications. Polymeric biomaterials have been extensively studied and implemented for several applications, such as delivery systems, cell uptake, and gene transfection. Moreover, in recent decades, research has become more involved in translational medicine, specifically in regenerative medicine and tissue engineering. Polymer degradation and erosion are crucial for all polymeric biomaterials. Degradation results in changes of polymer properties—such as molecular weight, shape, color and mechanical features—or of the polymer-based products by undergoing biological, chemical or physical reactions. In this Special Issue, we would like to collect the most advanced results (as reviews and/or original papers) concerning polymeric biomaterials and related polymer-based products, with particular reference to their in vivo and in vitro degradation and their biological and biomedical applications.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of
Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
