Agricultural Waste-Reinforced Polymer Composites: Preparation and Characterization

Message from the Guest Editors

Agricultural waste residues are generally regarded as a significant environmental burden globally. With the rapid growth of the global population, there is a need to utilize agro-waste, such as maize stalk, sugarcane bagasse, rice husks, and wheat husks, as reinforcing fillers to enhance the properties of polymers. This Special Issue discusses the development of green composites made from agro-waste biomass and polymers and their various applications, requiring the examination of properties via morphological, mechanical, flammability, thermal, rheological, and dynamic mechanical analyses.

We look forward to receiving your research contributions on this topic.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of
Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
