

Special Issue

MOF Containing Materials for Environmental Applications

Message from the Guest Editors

Removal or degradation of such organic pollutants are highly demanded in order to save the environment and human health. On the other hand, the most recent highly porous compounds are metal–organic frameworks (MOFs), which are mainly constructed from organic ligands (referred to as linkers) and metal clusters that serve as connectors. MOFs are especially characterized by their large surface area and ultrahigh porosity with pore sizes ranging from micro- to mesoporous, resulting in formidable adsorption performance. Therefore, the current Special Issue is interesting in collecting manuscripts covering the use of MOF-containing materials in environmental applications.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of
Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
