

## Special Issue

# Microbial Community Modeling: Prediction of Microbial Interactions and Community Dynamics

### Message from the Guest Editor

Interest in engineering microbial communities for application in biotechnology and biomedical science has rapidly grown over the last decade. The design and control of microbial communities still remains a grand challenge, particularly due to the complexity of interspecies interactions that require mathematical modeling and computational analysis as essential tools. This Special Issue calls for contributions across a broad range of areas that address recent computational and modeling developments for predicting species interactions and community dynamics and functions. Modeling frameworks of interest include metabolic network analysis, flux balance analysis, trait-based modeling, Lotka-Volterra modeling, evolutionary game theory, the cybernetic approach, functional gene-based modeling, thermodynamically-based modeling, individual-based modeling, integrative multiscale modeling, and other relevant approaches. We also welcome papers on data-driven inference of species interaction networks or gene co-expression networks in microbial communities.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q2 (Chemical Engineering (miscellaneous))
