

Special Issue

Machine Learning for LiDAR Point Cloud Analysis

Message from the Guest Editors

LiDAR, as an active remote sensing technology, can automatically and quickly establish 3D digital world as a point cloud. Recently, developments in LiDAR sensors and various platforms have greatly promoted the application of LiDAR in various fields. LiDAR point cloud analysis is a fundamental prerequisite for rigorously applying LiDAR point clouds to these fields. Diverse algorithms have since then been made available in the forms of data-driven, model-driven, or hybrid approaches to analyze and explore LiDAR point clouds. The latest techniques in machine learning have even enabled us to extract semantic information from LiDAR point clouds in a more intelligent and effective way and further expand the application scope of LiDAR point clouds. The Special Issue aims at contributions that focus on LiDAR point cloud analysis using machine learning (or deep learning) techniques. We are particularly interested in original papers that address innovative techniques and algorithms for generating and analyzing LiDAR point clouds, challenges in dealing with point cloud data in emerging remote sensing applications, and which unfold new applications for LiDAR point clouds.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
