Remote Sensing in Glaciology and Cryosphere Research

Message from the Guest Editors

The above-surface part of the cryosphere occupies around one-sixth of the Earth's surface and is located in places that are generally very remote from human habitation and infrastructure, and in challenging climatic conditions. Its study is, thus, well suited to the use of remote sensing techniques, especially those operated from spaceborne platforms, and snow and ice research was early to adopt remote sensing methods and to develop new algorithms for extracting information from them. New platforms and sensors, with higher spatial, spectral and temporal resolutions are coming online regularly, and are increasingly being used to generate quantitative data on seasonal and longer-term changes in glacier and ice sheet surface characteristics such as albedo and debris, and on the increasing occurrence of glacial melt in the form of supraglacial lakes and streams, and saturated firn. Contributions using new sensors and platforms that consider the integration of datasets or use cloud computing systems are especially welcome.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
