

## Special Issue

# Global Economic Development: Environment and Resources

### Message from the Guest Editor

Climate change and global warming issues are receiving more attention today from business leaders, policy-makers, and the general public. Limiting global warming below 2 degrees Celsius by 2050 compared to the industrial revolution era might necessitate transitioning to a resource-constrained but prosperous economy in which both developed and developing countries need to manage their resources more efficiently and effectively. This Special Issue aims to examine both theoretical & conceptual challenges and empirical & case studies in resource and environmental management in developing and developed countries. Of particular interest are examples and case studies of circular economy, sustainable business practices, green supply chain applications, design for the environment (DfE) applications and case studies, resource-management-oriented social enterprises, and progress in Sustainable Development Goals (SDGs) in developing and developed countries. Theoretical, as well as applied, topics in sustainable development with a focus on environmental and resource management are also welcome.

## About the Journal

### Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.
